

MarketStor, a leading provider of storage solutions to the IP video surveillance arena, announces a **hosted video** solution that lowers the cost of video surveillance implementations while raising the level of service and convenience. The iSurveillance solution is available exclusively through security integrators and installers.

IP video surveillance is the fastest growing segment of the security and surveillance arena, with increasing demand for higher quality, more scalable and manageable video content driving this acceleration. There is both a huge upgrade business from installed analog video solutions combined with a large first-time buyer market. Many regional retail and services organizations have yet to deploy video surveillance solutions and consequently are in the market for an affordable yet sophisticated video surveillance solution. The MarketStor

iSurveillance solution is simple to implement and support...all the integrator or customer needs to do is install the cameras, plug the network cables into the local switch and connect to the Internet. MarketStor does the rest.

MarketStor is the ideal partner for this rapidly growing security category:

- Five (5) petabytes of storage capacity, scalable to infinity
- Robust SAS70 data center with second redundant facility
- Direct relationships with leading camera providers
- Technical resources to support the integrator community
- Business model that simplifies the video hosting opportunity for the security integrators and makes the solution cost-effective for the end customer

MarketStor...Your Surveillance-in-the-Cloud Partner!
