

MarketStor technology is ideal for IP video surveillance implementations. We are a turnkey provider of IP Video surveillance solutions and services to security integrators and installers. MarketStor can provide all the products, resources and technology to design, build, implement and support any IP video application. Select a MarketStor turnkey package or select the components individually. We offer the leading cameras and software, and provide custom NVR and data solutions that are ideal for your application. We load and test all components prior to shipment and provide pre- and post-sales support for our solutions.

MarketStor's NVR/Surveillance Solution Features:

Infinitely scalable solution

NVR's that can be configured with up to 6tb of internal storage

Most simplistic, highly scalable and highest performing centralized storage available today

Support for RAID 0, 1, 5, 6, 10, 0+1, 50, 60

Support for Gigabit Copper, 10 Gigabit Copper, Fiber & SCSI

Enterprise class SATA & SAS drives

Available with 2tb drives

Digital & Analog hybrid NVR solutions available

A storage device deployed at the center of a surveillance system has unique requirements, such as 24/7 operations, video streaming and power efficiency.

MarketStor's Storage Solution meets the unique requirements needed for video surveillance storage:

- IP-Based
- Cost Effective
- Highly Scalable Across Capacity and Performance
- Low Entry Price Point

Transforming Video Storage

Video Surveillance has moved to the next level. IP-based video with multi-megapixel or multi-terabyte solutions are becoming standard in the industry today.

Video surveillance solutions demand high performance and adaptable video storage. When the need for more storage grows, making the choice on which type of storage to use, it could have a substantial impact on the bottom line. Small- and medium-sized businesses that have video surveillance and digital recording environments — where cost, performance, benefits and architecture are key factors — are moving from SCSI or ATA to SAS and SATA, providing the user with unparalleled choices in storage solutions.

Behind The Technology

Our scalable, price performance-leading technology provides a high-speed, expandable platform that is more reliable and cost-effective for expanding your surveillance environment.

Our solutions scale from two terabytes up to hundreds of terabytes, with desktop, 1u and 2u configurations. Implementing MarketStor technology ensures infinite scalability, protecting your storage and infrastructure investments and capitalizing on future technologies. Our unique storage architecture allows mixing of drive sizes and types, hot-swappable subsystems and addresses your growing storage needs with existing technology. Upgrading our subsystems is as simple as replacing drives, one at a time or all at once.

MarketStor storage solutions are the ultimate life-cycle technology for your ever-expanding storage world.

We offer many advantages over other storage standards including:

	VideoStor	I-SCSI
Transport Protocol	UDP	TCP
Scalability	Infinite	Limited to Server
Price	Low	Moderate - High
Performance	High	High
Simplicity	Easy	Moderate
Video Quality	Excellent	Affected by TCP Limitations
Total Cost of Ownership	Very Low	High
Support (Response/Quality)	Very High	Moderate to None
